

# IKM QwikWrite™

## A fast solution for creating simple customized employee and candidate assessments

**IKM provides online assessments and services that optimize the way you hire, train, certify and plan your workforce.**

IKM QwikWrite™ is an easy to use online tool that allows you to develop and deploy custom linear assessments in a secure and collaborative environment.

- Using QwikWrite™, custom linear assessments can be created and be ready to schedule within minutes.
- You deploy your completed assessments into your private library and they are immediately available for administration.
- Your custom assessment content is your IP and is maintained in a secure database not shared with other clients.
- Previously deployed assessments can also be easily updated or used as a base to create a new assessment.

### What is a Linear Assessment?

Linear assessments are simple assessments which provide the same questions in the same order to every test taker.

Linear testing provides a simple alternative to the more sophisticated adaptive testing when a comprehensive detailed analysis of strengths weaknesses is not required.

Linear testing is also ideal for converting existing paper-based tests to electronic delivery and scoring.

Linear assessment questions offer multiple formats including: multiple-choice, true/false, yes/no, and fill-in the blank questions. The number of available answers can vary between questions and individual questions can be weighted to contribute more or less to the overall score.

More sophisticated custom assessments, including sophisticated adaptive assessments, can be created using the IKM TestWrite™ tool.

Assessments developed using QwikWrite™ can be scheduled using the standard IKM Administration tools and delivery platform.

Assessment results are available for analysis and reporting immediately upon completion of the assessment.

## IKM QwikWrite™ - 3 steps to create your own assessment

### Step 1

#### Identify QwikWrite™ Players

Two operating roles are utilized in the test development process with QwikWrite™.

- **Test Development Managers** (TDM) can initiate the creation or revision of a QwikWrite™ test, develop questions and deploy the test.
- One or more **Authors** can also be identified, however, Authors may only develop the questions.

### Step 2

#### Develop questions

QwikWrite™ provides very simple and user-friendly options for question creation.

- Multiple question types (true/false, fill-in the blank, multiple choice)
- Weighted question values
- Add Images to questions
- Set time limits for the test
- Online collaboration and question review functions

### Step 3

#### Deploy assessment

Once all questions have been entered, the Test Development Manager can deploy the assessment using a one-click deployment button.

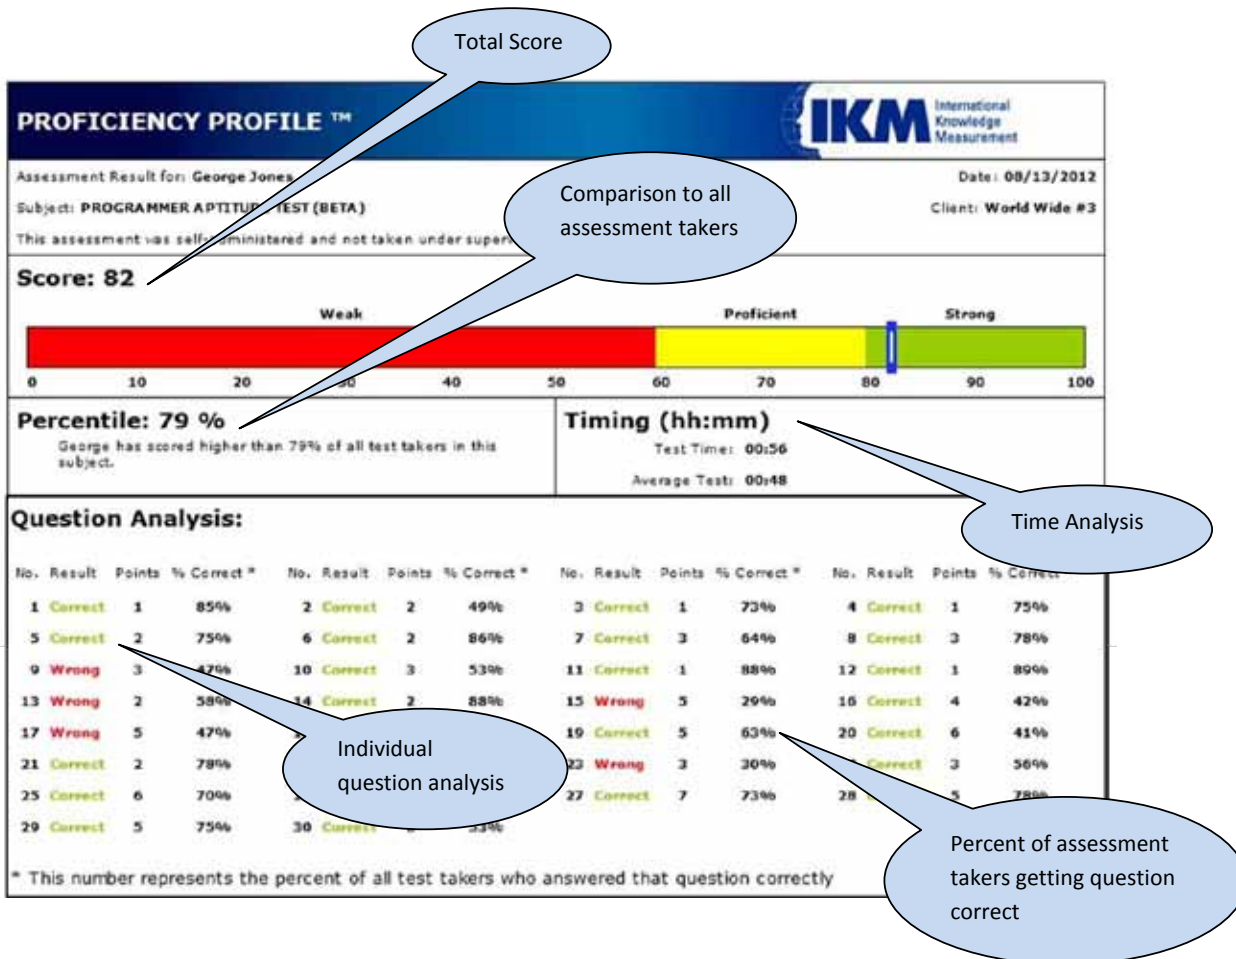

This makes the assessment immediately available for scheduling using the standard IKM Test Administration facilities.
